## The HP Designjet printing system

Turn orders in record time with the fastest 60-inch production printer for graphics<sup>6</sup>. Efficiently produce outstanding color and black-and-white prints with 6 HP Vivid Photo Inks. Rely on powerful performance from an easy-to-use printer.

### Outstanding speed

**HP Double Swath Technology** provides breakthrough speed and performance. The HP Designjet Z6600 Production Printer includes two sets of three HP 771 and HP 773 Designjet Printheads, creating a wide print swath—up to 1.67 inches/42.5 mm—and a high firing frequency to deliver prints with amazing speed. Six bi-color printheads feature 1,056 nozzles per color, 1200 nozzles per inch, and small drop volumes for top photo quality.

The **HP Optical Media Advance Sensor (OMAS)** allows you to print at top speeds and still get great output results. This breakthrough technology improves paper-advance control and accuracy, so the printer can print at higher speeds across multiple environmental conditions without impairing image quality.

### Efficient and unattended operation

Gain efficient operation using a six-ink printing system with an optimized configuration. Print from your favorite design applications or through third-party RIPs. Ensure image quality and reduce cleaning and waste using automatic drop detection and intelligent masking.

The **HP Multi-dimensional Smart Drop Placement Technology** enables the highest quality possible for a 6-ink system while guarding against potential media-feed or drop-placement errors.

The optimal combination of inks for each RGB or CMYK pixel is obtained using a dithering algorithm, which depends on the pixel tone rather than each individual color. Printed results are then optimized in terms of color gamut, smooth color transitions, and minimal image grain. After this step, the resulting image resolution is expanded to control more precisely each drop placement and to spread drops between the different passes using frequency-analysis methods that minimize ink-media interactions (dot visibility, coalescence, bleeding, etc.) and artifacts related to dot-placement errors.

**Intelligent masking** saves time, ink, and media by reducing reprints and extending printhead life. In multi-pass print modes, dots in every scan row can be printed by different physical nozzles on different passes.

Failing nozzles are identified by the embedded **Optical Drop Detector**. These are then flagged “do not use” because of misdirected drops, weak drops (low drop weight or drop velocity), or non-operation. Only “good” nozzles are used at each print location so banding and image quality defects are eliminated. After printing, the printer automatically performs recovery routines to restore failed nozzles during printhead service station cycles, saving time, ink, and the hassle of manual user interventions.

### HP Vivid Photo Inks

Create impressive long-lasting images in color and black-and white with rich optical density and smooth transitions using **HP Vivid Photo Inks**. Print on many substrates to deliver a wide range of jobs such as posters, canvas prints, and POP signs. HP Designjet printheads are designed together with HP Vivid Photo inks to provide precise, accurate placement of smaller drops and high speed. Each printhead prints two colors of ink with 1,056 nozzles per color.
